## **ComSys Educates Region's Small to Mid-sized Businesses On the Benefits of Utilizing Voice over Wireless LAN**

*New Technology Gaining in Popularity  
Because of its Unique Ability to  
Drive Profitability & Productivity*

GAINESVILLE, FL — September 2, 2009 — ComSys, an industry leader in unified communications, announced today that the company is educating the region's small to mid sized businesses on the valuable benefits associated with Voice over Wireless LAN technology (VoWLAN). ComSys expects the demand for VoWLAN to increase by year's end because of its unique ability to support various advanced business applications that drive profitability and employee productivity.

A wireless local area network is a local area network (LAN) that does not rely on wired Ethernet connections and can be either an extension to a current wired network or an alternative to it. Use of a WLAN adds flexibility and functionality to networking and enables users to move around while staying connected. Voice over IP (VoIP) technology, also known as the convergence of voice and data networks and has become the communications technology of choice for the majority of businesses, is now successfully supported by WLAN. Voice over Wireless LAN (VoWLAN) is a process of sending voice information in digital form over a wireless broadband network. Simply put, VoWLAN is VoIP delivered through wireless technology. The technology is often referred to "VoWi-Fi" or "Wi-Fi VoIP" because it uses the IEEE 802.11 set of specifications for transporting data over wireless local area networks and the Internet. The VoWLAN system includes all of the regular functions and messaging applications available on wired phones on the VoWLAN devices. Similar to

VoIP, VoWLAN also contributes to cost efficiency because calls are routed over the data network internally or over the Internet externally. As a result, mobile telephony costs can be eliminated or decreased significantly.

Employees have the ability to use VoWLAN phones to communicate by voice wirelessly with others inside and outside a facility. The experience is very similar to using a traditional wired telephone, except the user is free to move about the building. Additionally, a VoWLAN phone can operate from the rapidly growing Wi-Fi hotspots, enabling a person to use the same cellular phone while within or away from the office. Some mobile phones incorporate VoWLAN capability, which enables users to make calls over traditional cellular networks when no wireless local-area network is available. This gives employees tremendous freedom to conduct business from any location thereby increasing their own productivity while driving costs down.

The VoWLAN market will initially be driven by specific company needs, such as retail/warehouse sales tracking and inventory control, mobile telephony in medical facilities or campuses, and mobile security applications. For example, nurses and doctors within a facility can maintain voice communications at any time at less cost compared to cellular service.

"It is our mission to continually inform our customers of new technologies that may have a significant impact on the way they do business," said Donald Bugos, President of ComSys. "VoWLAN is just one example of technology that is on the horizon that will affect the way we communicate. Still in its infancy, it's critical that not only are companies made

aware of it, but more importantly how to properly deploy it. Without the latter it makes reaping its benefits challenging. As new technologies come into play we will bring it to our customer's attention because that is our role as their trusted communications advisor."

### **ABOUT COMSYS**

The history of Communication Systems, Inc. (dba ComSys) dates back to 1981. ComSys is North Central Florida's most customer-oriented business telephone and data communications company – providing commercial customers with a single point of contact for quality, cost effective, converged communication solutions.

ComSys is committed to establishing lasting business relationships with their clients. The company's goal is maximum customer satisfaction through total customer service.

ComSys provides its customers with industry leading products serviced by Factory Certified technicians. Customers are thoroughly trained in every component of their system by ComSys' highly experienced customer service team.

The company's local dispatch and warehouse center delivers round-the-clock parts and service availability to ensure system reliability. ComSys also offers comprehensive service 24 hours a day, 7 days a week and emergency service with guaranteed response times.

For more information on ComSys, in Gainesville - call 352.332.0359; in Ocala - call 352.622.3100; Nationwide - call 800.332.0359 or visit their website at [www.csi-florida.com](http://www.csi-florida.com).
