ComSys' Cybersecurity Technology Helps Local Businesses Protect Their Networks Against Global Attacks

*Donald Bugos, President of ComSys,
Provides Useful Advice to SMBs*

Gainesville, FL – June 27, 2017 - ComSys, a leading unified communications provider, helps local businesses protect their networks against growing global attacks. The company's state-of-the-art cyber security technology and defense plan enables customers to avoid being held hostage to hackers from other countries' ransomware attacks which have already been launched on a world-wide scale. Small and mid-sized businesses (SMBs) need to understand the nature of this threat and what appropriate steps they can take in order to secure their technology infrastructure from future breaches.

One of the most recent and frightening attacks is the WannaCry ransomware attack. Since launch, it has affected 150 countries and over 200,000 computers. Most users were made vulnerable after failing to upgrade their old Windows PCs with the latest software upgrades and security patches, which is often the case for SMBs. Since most business owners are focused on increasing revenues, satisfying customers and driving profit, technological vulnerabilities are often an oversight. For victims of

the WannaCry attack, employees were locked out of critical data, forms and documents they needed and users couldn't work properly unless the business owner paid the ransom to regain access to the files. This is a dire situation for any business owner especially because there is no guarantee that this is a one-time offense. This isn't the first global attack, nor is it likely to be the last.

ComSys actively fights these cybercriminals and advises all of its customers on how to handle these challenging scenarios. ComSys has developed a unique approach for combatting cyberattacks, like WannaCry. A stool requires all three legs to maintain its structure, and so does ComSys three-pronged defense. First, business owners must set the perimeter with a managed firewall as-a-service. While many businesses may already have a firewall in place it is important to regularly update the firewall, in order to prevent new threats from entering the business. Firewalls need to be actively strengthened in the same way that a stool needs to be checked from time to time in order to make certain that a screw hasn't come loose. When a hacker finds a loose screw in the firewall, they can exploit it and take the whole network down, which is exactly

why businesses not only need a firewall, but a managed firewall.

Second, businesses need to establish anti-virus and malware protection through proactive monitoring and patching for all servers and desktops. In the same way that firewalls need ongoing management and maintenance, so do anti-virus and malware protection services. This second leg in the stool is critical to strengthen, in order to support both the first and the third legs.

The third and final leg of protection is to ensure that the company has a proven backup and disaster recovery solution providing onsite appliance with image based backups for quick restoral of files folders. This is especially important if servers reside on site. This leg of protection ensures that even if a breach makes it all the way into the network, the company can quickly reboot and recover sensitive data almost instantaneously. If the company is in the cloud, data is almost impenetrable.

"The recent, massively, publicized attacks that have occurred on a global basis is just the beginning," stated Donald Bugos, President of ComSys. "Unfortunately, cybercrime will never go away. We have made an investment in the proper

cybersecurity technology and highly skilled professionals to ensure that our customers' networks remain secure. Our focus is on handling everything technical so our customers can focus on their businesses and drive their own profits. As they reach new levels of profitability, our business does better and it ends as a win-win for everyone. That's what makes us different."

About ComSys

The history of Communication Systems, Inc. (dba ComSys) dates back to 1981.

The company is North Central Florida's most customer-oriented business technology solutions company - providing commercial customers with a single point of contact for quality, cost effective, converged voice and data solutions.

ComSys recognizes the critical need for a solutions provider that combines leading edge technology with quality service and support, and, is committed to establishing lasting business relationships with their clients. The company's goal is maximum customer satisfaction through total customer service.

ComSys is one of a select few converged solution providers nationwide that qualify to be a

Technology Assurance Group (TAG) member.

ComSys provides VoIP Telephone Systems, Hosted Phone Systems, Call Center Solutions, Video Solutions, Structured Cabling and Wiring to businesses throughout the Gainesville, Ocala, Lake City and Leesburg areas. Our National Services Network can support and deliver our full range of products and services almost anywhere in the United States.

For more information on ComSys, in Gainesville - call 352.332.0359; in Ocala - call 352.622.3100; Nationwide - call 800.332.0359.
