

## **COMSYS KEEPS CUSTOMERS' SAFE THROUGH ROLLING BLACKOUTS**

*Innovative Technology Set to Replace  
Outdated Voicemail Systems*

GAINESVILLE, FL – July 9, 2012 - ComSys, a leader in unified communications, announced today that it has launched a data safety program to protect its customers from the expected increase in rolling blackouts and brownouts this summer. Companies across the board are using more energy to power their businesses than ever before and increasing energy demands are putting a strain on major energy suppliers. In years past, energy suppliers have turned to blackouts and brownouts as a last resort, yet in the coming months blackouts will be an unfortunate necessity.

Every year companies face this problem, along with other disasters such as hurricanes, tornadoes, storms, power outages and floods. Oftentimes these disasters cause major disruptions to the business and in some cases companies can lose critical computer files or company records. Most businesses can't afford to lose these files or have their phones down during peak hours. As a result, many businesses have turned to ComSys to help eliminate these threats, and are leveraging their technological expertise to create a competitive advantage for themselves.

Business Continuity Disaster Recovery (BCDR) automatically

creates failsafes for key communications systems, so in the event of an emergency, businesses can run uninterrupted. For example, if a phone line were to go down, incoming calls would immediately be transferred to a backup carrier and calls would then be routed to cell phones instantly. Another example of BCDR in action is when all computer files are automatically backed up at the end of every day and saved to a different location so they can immediately be accessed in the event of an emergency. ComSys' team is filled with technology experts, who know many other practical ways to apply futuristic technology to solve today's real business problems.

"The only thing consistent about technology is that it's always changing," stated Donald Bugos, President of ComSys. "Most business owners have absolutely zero spare time to research new developments and our differentiator is that we not only find these solutions, but we sift through them until we find technological advancements that can make a difference in our customers businesses. At the end of the day, our focus is on using technology only if it will increase our customers' overall profitability and give them a competitive advantage in their industry."

### **ABOUT COMSYS**

The history of Communication Systems, Inc. (dba ComSys) dates back to 1981. ComSys is North Central Florida's most customer-oriented business telephone and data communications company – providing commercial customers with a single point of contact for quality, cost effective, converged communication solutions.

ComSys is committed to establishing lasting business relationships with their clients. The company's goal is maximum customer satisfaction through total customer service.
