## **ComSys Provides Innovative Home Office Cybersecurity Solutions for the Nearly 50% of Remote Workers Infected By Malware**

*Leading Managed Technology Services Provider (MTSP) Protects SMBs and Their Employees*

GAINESVILLE, FL – May 2020 - ComSys, a leading managed technology services provider (MTSP), announced today that the company is providing home office cybersecurity for remote workers to support them through the current pandemic and beyond.

According to a BitSight report, "Identifying Unique Risks of Work From Home Remote Office Networks," the findings revealed that "45% of companies had malware on their corporate-associated home networks." The study included more than 41,000 organizations. For small to mid-sized businesses (SMBs) this has very strong implications for their remote workforce. Where SMBs typically could ignore the cybersecurity of the home office environment in the past, that's no longer possible as employees have been forced to work from

home, and rely on corporate connectivity, software and devices to perform their daily tasks.

"To sum it all up, vulnerability at the home-office is now corporate vulnerability," stated Donald Bugos, President of ComSys. "Unfortunately, whenever we get back to normal life, it won't be so normal, anymore," he said, citing the expected office policies which will force people to adhere to staggered schedules, where a worker comes into the office on Mondays/Wednesdays and another comes on Tuesdays/Thursdays. The expected growth of remote working, even after the states reopen will still be enormous. Work-from-home is fast becoming the "new normal" and with tech giants like Twitter, Microsoft, Google and Facebook all extending work-from-home policies, many SMBs are trying to figure out the best way to reorganize themselves for success. Twitter and Square have announced their plans to let employees

work remotely in perpetuity. Google and Facebook have remote policies in place at least until 2021. Since these tech giants often serve as a leading indicator for SMBs across the country, business owners are looking for innovative, yet practical, ways to adapt to this new working environment and to ensure that their virtual infrastructure is secure.

The two biggest challenges for business owners who find themselves in this new work-from-home scenario are 1) How do I properly manage my employees? and 2) Which technology do we really need? The past several weeks have been a crash course in management, forcing business owners to innovate management solutions for employees, which leaves the second challenge up for resolution. For any business owner who wants to address this vulnerability, at a minimum, they must equip their employees with a combination of the following technologies, Windows virtual desktops, SD-WAN, firewall and a

printer/scanner. Virtual desktops provide employees with access to apps, software and technology that they utilize on their work computer. SD-WAN establishes a secure and efficient means of connectivity for employees and a monitoring solution ensures the ongoing security of any devices or networks from cyberattacks, like phishing or ransomware. Lastly, printer/scanner solutions are absolute necessities for specific employees.

With a relatively simple bundle of technology, SMBs can circumvent many of the challenges imposed on them through this pandemic, and they can set their company up for success as we transition into the “new normal.” While remote working has been steadily growing for years, there is now plenty of data, and common sense, to back these necessary shifts. According to Kate Lister, President of Global Workplace Analytics, “Our best estimate is that 25-30% of the workforce will be working-from-home multiple days a week by the end of 2021.” That number is up from 3.6% of employees working from home half-time or more

## **ABOUT COMSYS**

The history of Communication Systems, Inc. (dba ComSys) dates back to 1981.

The company is North Central Florida’s most customer-oriented business technology solutions company -

providing commercial customers with a single point of contact for quality, cost effective, converged voice and data solutions.

ComSys recognizes the critical need for a solutions provider that combines leading edge technology with quality service and support, and, is committed to establishing lasting business relationships with their clients. The company’s goal is maximum customer satisfaction through total customer service.

ComSys is one of a select few converged solution providers nationwide that qualify to be a Technology Assurance Group (TAG) member.

ComSys provides VoIP Telephone Systems, Hosted Phone Systems, Call Center Solutions, Video Solutions, Structured Cabling and Wiring to businesses throughout the Gainesville, Ocala, Lake City and Leesburg areas. Our National Services Network can support and deliver our full range of products and services almost anywhere in the United States.

For more information on ComSys, in Gainesville - call 352.332.0359; in Ocala - call 352.622.3100; Nationwide - call 800.332.0359.
